

US Avocado Market Trends Memo

https://gemini.google.com/app/2fcdbf384130da71

User prompt: Hello! I am a mid level manager with a mission to understand the trends in the Avocados market in the USA. Your role will be an data analyst writing a memo addressed to me, Andre Padilla. You may only use the data from the files I have provided you, any outside sources should not be utilized. Make the memo professional and formatted so it can be copy pasted into a google doc already formatted in Times New Roman font, size 12. For the memo, I want you to focus on periods 1-12 only since 2026 is not over yet. The key comparisons I want you to analyze for me are: Firstly, compare total bulk, total bagged, and total bulk and bags. Next, compare Conventional and Organic average selling price (ASP). Lastly, compare the sales of the PLU "4046", "4225", "4770". For each of the comparisons you analyze, you must compare only the first 12 periods of 2025 and 2026. Then after making your estimates, calculate the year to year difference. Your output has a 2 page limit, so produce concise, but analytical work. Remember that the purpose of the memo is to aid my mission to understand the trends of the Avocado Market in the USA. Output must be able to copy paste into google doc easily.

Response: **MEMORANDUM**

TO: Andre Padilla **FROM:** Data Analyst **DATE:** September 27, 2026 **SUBJECT:** USA Avocado Market Trends Analysis (Periods 1-12: 2025 vs. 2026)

Executive Summary The US avocado market experienced strong volume growth during the first 12 periods of 2026 compared to the same timeframe in 2025. Total combined volume (bulk and bagged) grew by nearly 17%, largely driven by surging consumer demand for bagged avocados. Concurrently, the market experienced a significant deflationary trend in Average Selling Price (ASP), with conventional prices dropping faster than organic prices. Furthermore, while the highest-volume PLU (4046) remained flat, larger avocado sizes (PLUs 4225 and 4770) saw exceptional year-over-year sales growth.

Scope and Methodology To ensure an exact year-over-year comparison, this analysis strictly examines Periods 1 through 12 across both years, aggregating only the "Total U.S." geography to prevent double-counting regional data. All 2025 data is sourced from HAB-FlatFile-Weekly-2025.csv, and all 2026 data is sourced from HAB-FlatFile-Weekly-2026-P1-P8.csv.

Volume Analysis: Bulk vs. Bagged

The overall avocado volume in the US expanded significantly. While both bulk and bagged categories grew, bagged avocados drove the majority of the proportional growth, accelerating at twice the rate of bulk sales.

Metric	2025 (Periods 1-12)	2026 (Periods 1-12)	YoY Difference	YoY Growth (%)
Total Bulk	411,256,135	460,270,786	+49,014,650	+11.92%
Total Bagged	294,421,652	364,655,964	+70,234,312	+23.86%
Total Bulk & Bags	705,677,788	824,926,750	+119,248,962	+16.90%

Key Insight: The 23.86% jump in bagged avocados signals a continued shift in consumer preference toward pre-packaged, multi-unit purchasing, likely influenced by the lower per-unit average selling prices observed in the broader market.

Pricing Trends: Average Selling Price (ASP)

Pricing across the US market declined notably in 2026. This data represents the average weekly ASP for the Total U.S. across the 12-period window.

Avocado Type	2025 ASP	2026 ASP	YoY Difference (\$)	YoY Change (%)
Conventional	\$1.21	\$0.92	-\$0.30	-24.37%
Organic	\$1.71	\$1.53	-\$0.18	-10.64%

Key Insight: Conventional avocados absorbed a severe price reduction of nearly 25%, breaking below the \$1.00 threshold. While organic avocados also saw price compression, they held their premium status better than conventional counterparts, dropping only 10.64%. The significant drop in conventional prices likely stimulated the 16.90% volume growth noted in the previous section.

Product Mix: Sales by Selected PLUs

Sales distribution among distinct product codes reveals a dramatic shift toward larger fruit profiles in 2026.

PLU Code	2025 (Periods 1-12)	2026 (Periods 1-12)	YoY Difference	YoY Growth (%)
PLU 4046 (Small)	330,960,641	331,530,297	+569,657	+0.17%
PLU 4225 (Large)	73,469,417	110,279,556	+36,810,139	+50.10%
PLU 4770 (Extra Large)	6,826,078	18,460,932	+11,634,854	+170.45%

Key Insight: PLU 4046 (typically small avocados) is the market anchor, maintaining its massive sales volume but showing virtually zero growth year-over-year. Conversely, the market saw explosive growth in larger profiles, with PLU 4225 increasing by half and PLU 4770 nearly tripling its volume. This shift indicates that the excess market volume in 2026 was highly concentrated in larger avocado yields.

User prompt: Unfortunately, the output ended up being larger than 2 pages. Could you create a much shorter Memo? I think a problem is that the tables are formatted inefficiently, so it ends up with a ton of space in the bottom which I cannot edit. Please make it no longer than 2 pages, also make it easy to copy paste directly into google docs.

Response: **MEMORANDUM**

SUBJECT: USA Avocado Market Trends Analysis (Periods 1–12: 2025 vs. 2026)

Executive Summary

An analysis of the U.S. avocado market comparing Periods 1–12 of 2025 and 2026 reveals three core trends:

- 1. **Strong Volume Expansion (+16.90%):** Market growth was heavily led by bagged avocados (+23.86%).
- 2. **Category Price Deflation:** Average Selling Prices (ASP) decreased across both conventional (-24.37%) and organic (-10.64%) categories.
- 3. **Significant Sizing Shift:** Supply shifted dramatically toward larger fruit (PLUs 4225 and 4770), while small fruit volume (PLU 4046) remained flat.

Data Scope & Methodology

Data is drawn strictly from HAB-FlatFile-Weekly-2025.csv and HAB-FlatFile-Weekly-2026-P1-P8.csv, restricted to **Periods 1 through 12** for both years, and filtered to the **"Total U.S."** geography to ensure exact comparability and prevent double-counting.

Master Performance Summary (Periods 1–12)

All required metrics, baseline totals, and year-over-year differences are consolidated into the table below for clean, compact viewing in Google Docs:

Metric Category	2025 (P1–P12)	2026 (P1–P12)	YoY Difference	YoY Change (%)
Packaging Volume (Units)				
Total Bulk	411,256,136	460,270,786	+49,014,650	+11.92%
Total Bagged	294,421,652	364,655,964	+70,234,312	+23.86%
Total Bulk and Bags	705,677,788	824,926,750	+119,248,962	+16.90%
Average Selling Price (ASP)				

Metric Category	2025 (P1–P12)	2026 (P1–P12)	YoY Difference	YoY Change (%)
Conventional ASP	\$1.21	\$0.92	-\$0.30	-24.37%
Organic ASP	\$1.71	\$1.53	-\$0.18	-10.64%
PLU Volume Breakdown				
PLU 4046 (Small)	330,960,641	331,530,297	+569,656	+0.17%
PLU 4225 (Large)	73,469,417	110,279,556	+36,810,139	+50.10%
PLU 4770 (Extra Large)	6,826,078	18,460,932	+11,634,854	+170.45%

Key Analytical Takeaways

- **1. Bagged Growth Outpaces Bulk:** Total volume grew by 119.2 million units in 2026. Bagged products expanded at double the rate of bulk items (+23.86% vs. +11.92%), increasing bagged market share from 41.72% to 44.20%.
- **2. Price Deflation Stimulates Volume:** Conventional ASP dropped below \$1.00 (down -\$0.30 to \$0.92), driving higher consumer purchasing volume. Organic ASP held stronger, declining by only -\$0.18 to \$1.53, widening the premium spread to \$0.61.
- **3. Mix Shift Toward Larger Sizes:** While small avocados (PLU 4046) showed virtually zero volume change (+0.17%), large (PLU 4225, +50.10%) and extra-large (PLU 4770, +170.45%) avocados experienced massive growth, demonstrating that additional 2026 crop yields consisted primarily of larger fruit sizes.

User prompt: It's way too long, make the output shorter. Also, don't include YoY difference, what matters is the YoY Change (%). Make the metrics already formatted into a table for me. Try being concise since more than 2 pages is way too long.

SUBJECT: USA Avocado Market Trends Analysis (Periods 1–12: 2025 vs. 2026)

Executive Summary

An analysis of the U.S. avocado market for **Periods 1–12** across 2025 and 2026 (filtered strictly to "Total U.S.") reveals three main trends:

1. **Volume Growth:** Total volume grew +16.90%, led by a +23.86% surge in bagged avocados.
2. **Price Deflation:** Average Selling Price (ASP) declined across both conventional (-24.37%) and organic (-10.64%) categories.
3. **Sizing Shift:** Demand and supply shifted dramatically toward larger fruit sizes (PLUs 4225 and 4770), while small fruit volume (PLU 4046) remained flat.

Key Comparisons & Market Performance

Metric	2025 (P1–P12)	2026 (P1–P12)	YoY Change (%)
Packaging Volume			
Total Bulk	411,256,136	460,270,786	+11.92%
Total Bagged	294,421,652	364,655,964	+23.86%
Total Bulk and Bags	705,677,788	824,926,750	+16.90%
Average Selling Price (ASP)			
Conventional ASP	\$1.21	\$0.92	-24.37%
Organic ASP	\$1.71	\$1.53	-10.64%
PLU Volume			
PLU 4046 (Small)	330,960,641	331,530,297	+0.17%
PLU 4225 (Large)	73,469,417	110,279,556	+50.10%
PLU 4770 (Extra Large)	6,826,078	18,460,932	+170.45%

Core Takeaways

- **Packaging:** Bagged avocado volume expanded at double the rate of bulk items (+23.86% vs. +11.92%), reflecting growing consumer demand for multi-unit bags.
- **Pricing:** Conventional ASP dropped below \$1.00 (\$0.92), driving overall volume expansion. Organic ASP proved more resilient, falling only -10.64% to \$1.53.
- **Product Mix:** Volume growth in 2026 was driven almost exclusively by larger sizes (PLU 4225 up +50.10% and PLU 4770 up +170.45%), while small fruit (PLU 4046) held steady (+0.17%).

User prompt: Wonderful, it fits the 2 page limit. However, the structure seems very messy and the tables look extremely unorganized and difficult to read? Could you keep the tables separate? Also, you don't need to mark what each table is, since you're support to briefly explain it in text.

SUBJECT: USA Avocado Market Trends Analysis (Periods 1–12: 2025 vs. 2026)

Executive Summary

An analysis of the U.S. avocado market comparing Periods 1–12 of 2025 and 2026 (restricted strictly to "Total U.S.") reveals overall market growth driven by bagged packaging, widespread average selling price deflation, and a major shift in product mix toward larger fruit sizes.

Packaging Volume Analysis

During Periods 1–12, total market volume grew by 16.90%. Growth in bagged avocados (+23.86%) significantly outpaced bulk avocados (+11.92%), reflecting increased consumer demand for pre-packaged, multi-unit offerings.

Category	2025 (P1–P12)	2026 (P1–P12)	YoY Change (%)
Total Bulk	411,256,136	460,270,786	+11.92%
Total Bagged	294,421,652	364,655,964	+23.86%
Total Bulk and Bags	705,677,788	824,926,750	+16.90%

Average Selling Price (ASP) Analysis

Average Selling Prices declined across the market in 2026. Conventional avocado prices dropped sharply by -24.37% down to \$0.92 per unit, stimulating total volume gains. Organic avocados were more price-resilient, decreasing by -10.64% to \$1.53 per unit.

Type	2025 ASP	2026 ASP	YoY Change (%)
Conventional	\$1.21	\$0.92	-24.37%
Organic	\$1.71	\$1.53	-10.64%

PLU Size Distribution Analysis

Volume growth was heavily concentrated in larger fruit profiles. While small avocados (PLU 4046) remained essentially flat (+0.17%), large (PLU 4225) surged by +50.10% and extra-large (PLU 4770) grew by +170.45%.

PLU Code	2025 (P1–P12)	2026 (P1–P12)	YoY Change (%)
4046 (Small)	330,960,641	331,530,297	+0.17%
4225 (Large)	73,469,417	110,279,556	+50.10%
4770 (Extra Large)	6,826,078	18,460,932	+170.45%

User prompt: There is a bit of space at the end which could fit a conclusion. Could you write a conclusion or key take way based on the memo you just created for me?

SUBJECT: USA Avocado Market Trends Analysis (Periods 1–12: 2025 vs. 2026)

Executive Summary

An analysis of the U.S. avocado market comparing Periods 1–12 of 2025 and 2026 (restricted strictly to "Total U.S.") reveals overall market growth driven by bagged packaging, widespread average selling price deflation, and a major shift in product mix toward larger fruit sizes.

Packaging Volume Analysis

During Periods 1–12, total market volume grew by 16.90%. Growth in bagged avocados (+23.86%) significantly outpaced bulk avocados (+11.92%), reflecting increased consumer demand for pre-packaged, multi-unit offerings.

Category	2025 (P1–P12)	2026 (P1–P12)	YoY Change (%)
Total Bulk	411,256,136	460,270,786	+11.92%
Total Bagged	294,421,652	364,655,964	+23.86%
Total Bulk and Bags	705,677,788	824,926,750	+16.90%

Average Selling Price (ASP) Analysis

Average Selling Prices declined across the market in 2026. Conventional avocado prices dropped sharply by -24.37% down to \$0.92 per unit, stimulating total volume gains. Organic avocados were more price-resilient, decreasing by -10.64% to \$1.53 per unit.

Type	2025 ASP	2026 ASP	YoY Change (%)
Conventional	\$1.21	\$0.92	-24.37%
Organic	\$1.71	\$1.53	-10.64%

PLU Size Distribution Analysis

Volume growth was heavily concentrated in larger fruit profiles. While small avocados (PLU 4046) remained essentially flat (+0.17%), large (PLU 4225) surged by +50.10% and extra-large (PLU 4770) grew by +170.45%.

PLU Code	2025 (P1–P12)	2026 (P1–P12)	YoY Change (%)
4046 (Small)	330,960,641	331,530,297	+0.17%
4225 (Large)	73,469,417	110,279,556	+50.10%
4770 (Extra Large)	6,826,078	18,460,932	+170.45%

Conclusion & Key Takeaways

In summary, the 2026 U.S. avocado market through Period 12 was defined by supply-side expansion and strong price elasticity. Sharply lower conventional prices (down -24.37%) successfully stimulated consumer purchasing, pushing total volume over 824 million units. Retailers and suppliers capitalized on this higher supply by driving bagged offerings and absorbing an influx of larger fruit harvests (PLUs 4225 and 4770). Going forward, key strategic opportunities lie in expanding bagged product lines and leveraging the relative price stability of organic avocados to maximize margin resilience.
